Personnel

Principal Investigators: Asher Soldwedel
Sponsor: Broward Urban River Trails, South Florida water Management District
Collaborators: Aubrey Craun, Michael Stamm

Project Description

The North Fork New River located in Downtown Fort Lauderdale has undergone many positive changes in recent history, thanks to collaborative efforts aimed at improving the plight of the river which was neglected and abused for many years. Successful public/private partnerships have brought about community-based solutions to the health and well-being of the river basin. Among those are projects carried out by the South Florida Water Management District (SFWMD) and Broward County Environmental Protection Department (EPD) including dredging efforts to remove sediments and shoals that impeded water flow, created stagnant pools of water and hampered navigation.

For a two year period the VPT Lab developed and maintained a dedicated website for community and stakeholders to learn about events as well as overall North Fork New River Restoration activities. Since 2009 the website has been relocated to the link below.
